Hyundai boasts that the Sonata is excellent in terms of performance and safety. Just like with any other vehicle, however, the Sonata can have problems starting at times. In this case, there are a few things you can check before calling a mechanic or having your Sonata towed. These troubleshooting controls will save you time and money in the long run. Place the key in your Sonata's power switch and try to turn it over. If the key is locked and does not turn on at all, there are a couple of things to check. If the steering column is not in the correct position, the key does not turn. Turn the steering wheel left and right until it clicks in place, and then try turning the button again. Check the fuel indicator with the key in the Accessories position. If the indicator shows low fuel consumption or a fuel warning light is on, there may not be enough gas in your Sonata to start the engine. Add a gallon of gas to the tank. If the indicator doesn't work or you're not sure how much is in the vehicle, add a gallon of gas to be safe. Try Try start the engine again. Leave the key in the Accessories position and check the battery of your Hyundai Sonata. For this purpose, turn on the external headlights or interior lights. If the lights don't light up, chances are there's a problem with the battery. You may need to replace the battery, but often the engine can be started or the battery recharged. Locate the lever that releases the hood and pull it. Walk to the front of your Sonata and open the hood. Check that the levels of oil, transmission fluid and refrigerant are sufficient. The absence of liquid or low liquid can cause engine problems in the Sonata. Locate the dipsticks and pull each one out, checking to make sure they are above the minimum fill line. Try to start your vehicle's engine and listen to any sounds that might give you a clue as to why it doesn't start. Turn the button in the Start position. If you don't hear anything, you suspect a faulty ignition switch. If you hear the click on the sounds but not on the engine noises, there may have been a problem with the Sonata starter. If you hear engine noise, but the engine does not start or run smoothly, you can have a problem with the refueling system. Call or contact a towing or roadside assistance company to have your car towed to a professional mechanic or dealership. The Hyundai dealership should be able to diagnose and repair any issues you may have with your Sonata. The new and new Hyundai Sonata Hybrid does exactly that from the EPA, reaching 37 mpg city/highway combined, making it a class leader among its gas-electric peers, four doors. And in the typical Korean OE way, it does it for less money than you might think. Offered in two packages, the entry level, well-equipped Hyundai Sonata Hybrid will raise for \$25,795, and the pampered Premium trim by adding leather components and technology will go for \$30,795 (excluding the \$750 destination cost). Both versions are powered by a 2.4-liter hybrid engine paired with a 6-speed automatic transmission that uses the lithium polymer battery pack, a core of Hyundai's Hybrid Blue Drive technology. But he knew he had both a turbo and a hybrid on the road. The direct injection Theta II 4-cylinder that powers the 2011 Sonata 2.0T, with a double parchment steel one-piece and exhaust manifold, promises to pump 274 hp and 269 lb.-ft. torque on regular fuel. Yet mileage is still quite respectable at 22/34. Traditionally vacuum-vacuumed, the Theta II's electric expenditure offers better control and efficiency. The backpressure can be reduced when turbo power is not needed and the tailgate can be opened during cold starts to speed up catalytic converter heating. This new engine will be available on the Sonata SE and Limited trim levels, both versions sending power to the front wheels via Hyundai's A6LF2 6-speed automatic transmission. Perhaps even more impressive than the power of sonata 2.0T is its price, it should start below \$25,000 when it hits the market later this year. Impressive is also the, the first car of this for Hyundai in the U.S. market. A complete parallel hybrid, its energy storage is 95.9 lb. lithium-polymer batteries packaged in the front section of the trunk. The combined power of the 2.4-liter Atkinson 4-cylinder and electric motor is 209 hp, CV, cvt found in other medium-sized hybrids. Hyundai claims the Sonata Hybrid returns 39 mpg to the highway.
